Conversational analytics

Confirm before relying. Quotas, prices, and names change.

Conversational analytics is Contact Lens under a new name

Contact Lens was previewed 3 December 2019 and generally available 23 July 2020. Real-time rules arrived 1 December 2020. Chat analytics arrived 29 November 2022. Post-contact summaries became generally available 25 March 2024. The 4 August 2026 document-history note says Contact Lens is now conversational analytics.

You enable it per contact with the recording and analytics block. Real-time concurrent calls default to a quota of 300. Post-call jobs are sized from duration and volume. The planning formula in the quota page is duration times 0.4 times calls per hour, divided by 60.

- Redaction is a setting. Confirm it before you promise it.
- Categories are rules. They are not Lex intents.
- Summaries can be wrong. The recording is the evidence.
- A contact with analytics off produces no transcript to search.

Configure conversational analytics and fix the empty transcript

Enable the analytics behavior on the recording block for the flows that need it, including the outbound whisper if outbound matters. Confirm the language. Confirm redaction. Check the real-time quota if supervisors say rules never fire during a storm. Post-call jobs scale with

minutes. Use the quota page's 40 percent rule of thumb to see if you are out of job concurrency.

Names: the console may say conversational analytics. Your old diagram may say Contact Lens. Search both.

- A flow that sets recording off 'for this queue' also kills the transcript.
- Rules on keywords need the real-time path.
- Summaries are absent until the post-contact job finishes.
- Chat analytics is a separate enablement from voice. It arrived later and is configured on the chat contact.
