Call flow ladder

One inbound voice contact, from the PSTN to after-contact work.

1. Caller ? Dials a claimed or ported number.

2. Carrier ? Hands the call to Connect telephony. This is not a CUCM SIP trunk you administer.

3. Inbound flow ? Plays prompts, calls Lex, calls Lambda, sets attributes.

4. Queue ? Customer queue flow runs while the contact waits.

5. Routing ? The profile with the best priority and a satisfied delay receives the offer.

6. Whisper ? One side hears audio before the join. E911 copies CivicAddress here when the dialed string is 911 or 933.

7. CCP ? WebRTC media. TCP 443 and UDP 3478.

8. After contact ? ACW, recording object, CTR, conversational analytics.
