Independent study lab

This is an independent, free, learning-only student project. It respects every company and vendor. Trademarks belong to their owners. It is not affiliated with or endorsed by Amazon Web Services, Cisco, Genesys, or any other company. If you have a concern, the page will be removed or corrected promptly through the contact form. Nothing here is sold. There are no ads. The author is happy to volunteer for any organization.

Cutover checklist

Confirm before relying.

A migration playbook

- Dual-run the recording tools.
- Translate quick connects from the old speed-dial list, and delete the dead ones.
- Hours and holidays are a data migration, not a memory test.
- Keep a glossary so 'skill' means one thing in the new design.

Rebuilding every script before anyone has taken a CCP call.

The mapping table you put in the migration pack

- Write one row per old object, with the Connect object and the pitfall.
- Skills can become proficiencies or extra queues. Pick one and say why.
- Hunt pilots become queues plus priority and delay.
- The lab translator does this row by row.

Creating a queue named after every CUCM partition.

Pitfalls that show up in every platform

- Write the AHT formula on the report.
- Test the external transfer with a real desk phone.
- Inventory holidays.
- Decide what 'abandoned' means.

A spreadsheet that says 'like for like' with no formulas.
